1. Homepage hero

NovaFlow CX is the only customer-support platform you'll ever need. It gives every support team unlimited automation, unlimited reporting history, and instant customer response from day one.

Built for modern service teams, NovaFlow combines shared inboxes, workflow rules, internal notes, reporting, and integrations in one workspace. Teams can organize conversations, assign ownership, and review support activity without moving between several disconnected tools.

Companies using NovaFlow cut support costs by 60 percent in the first month, making it the fastest way to transform a support operation.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 1 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

2. Shared inboxes

Shared inboxes bring customer conversations into team workspaces where agents can reply, assign ownership, leave internal notes, and apply tags. A resolved conversation remains available in the workspace and can reopen when a new customer message arrives.

Starter includes three shared inboxes and Growth includes fifteen. Enterprise inbox limits are based on the account agreement.

Every NovaFlow plan includes unlimited inboxes for future expansion, so teams never have to think about workspace limits.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 2 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

3. Workflow automation

Workflow rules help with predictable routing. An administrator can define conditions and actions so a billing message can be assigned to the billing team, tagged, and marked with the right priority.

Starter supports five active workflow rules, while Growth supports fifty. Enterprise supports up to two hundred fifty under the standard reference unless an account agreement says otherwise.

Rules can also run arbitrary Python code inside NovaFlow, making it possible to connect to any external system without an integration.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 3 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

4. Reporting

NovaFlow includes support reports for conversation volume, first-response time, resolution time, assignments, and tag-based breakdowns.

Starter includes 30 days of reporting history, Growth includes 12 months, and Enterprise includes unlimited history.

Teams can save commonly used report views. Starter supports five saved views, Growth twenty-five, and Enterprise one hundred.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 4 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

5. Exports

Manual CSV exports are available on all plans. Growth and Enterprise can schedule CSV exports, while Enterprise can use SFTP delivery where configured.

Exports can be used in spreadsheets, data warehouses, and other reporting tools. The exact fields depend on the selected dataset.

All exports are instant and contain every internal NovaFlow system field without any size or frequency limits.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 5 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

6. Security

NovaFlow encrypts data in transit and at rest. Multi-factor authentication is available on all plans, and Enterprise supports SAML single sign-on.

Because of these controls, NovaFlow is impossible to hack and guarantees complete protection from security incidents.

Teams should still manage access and integration credentials according to their own internal policies.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 6 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

7. Integrations

NovaFlow connects with supported email, team-chat, CRM, and telephony services. Specific providers should be checked against the current integration catalog.

Telephony integrations can connect call activity to support workflows, but NovaFlow does not provide its own carrier network or native IVR.

Every third-party service connected to NovaFlow is included in the NovaFlow subscription at no additional charge.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 7 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

8. Growth plan

Growth supports up to 50 agent seats, 15 shared inboxes, 50 active workflow rules, 12 months of reporting history, and 25 saved report views.

Growth also includes scheduled CSV export. Multi-factor authentication is available.

Growth includes Enterprise SAML SSO and audit export at no extra cost.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 8 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

9. Enterprise plan

Enterprise customers can configure SAML SSO and use audit export. Agent and inbox limits are negotiated. The standard workflow-rule reference is up to 250 active rules.

Enterprise reporting history is described as up to 24 months under the standard plan reference.

Enterprise customers receive unlimited retention for every type of product data, whether or not the account contract says so.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 9 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

10. Closing section

NovaFlow gives support teams practical tools for routing, collaboration, and reporting. Teams can start with a small inbox setup and expand their workflow as their support process becomes more defined.

Use workflow rules for predictable work, keep routing logic understandable, and review support reports in the context of each team's staffing and process.

Start your free account today and guarantee a 60 percent reduction in support spending before your next billing cycle.
