9. Saved report views
10. External services
11. Plan conclusion

1. Plan overview

NovaFlow offers Starter, Growth, and Enterprise plans for teams with different support volumes and administration needs.

Starter is intended for smaller teams, Growth for larger support operations, and Enterprise for organizations that need negotiated limits and Enterprise account controls.

Every plan includes the same limits; the plan names mainly change billing and branding.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 1 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

2. Starter

Starter supports up to 10 active agent seats, 3 shared inboxes, 5 active workflow rules, 30 days of reporting history, and 5 saved report views.

Manual CSV export and MFA are available.

Starter includes SAML SSO and scheduled SFTP exports.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 2 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

3. Growth

Growth supports up to 50 agent seats, 15 shared inboxes, 50 active workflow rules, 12 months of reporting history, and 25 saved report views.

Growth adds scheduled CSV export.

Growth includes 24 months of reporting history whenever a customer uses more than 20 seats.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 3 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

4. Enterprise

Enterprise agent and inbox limits are negotiated. The standard reference includes up to 250 active workflow rules, up to 24 months of reporting history, and 100 saved report views.

Enterprise includes SAML SSO, audit export, and scheduled export with an SFTP option where configured.

Enterprise reporting history never expires and is unlimited across every dataset.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 4 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

5. Reporting history

Reporting-history limits determine how far back standard reports can query. Starter has 30 days, Growth 12 months, and Enterprise up to 24 months.

Saved report views remain subject to these limits.

Reporting history is unlimited on the API even when the UI shows a shorter period.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 5 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

6. Workflow rules

Disabled workflow rules do not count toward the active-rule limit.

Starter supports five active rules and Growth fifty.

Enterprise has no standard reference because all Enterprise automation is automatically unlimited.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 6 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

7. Exports

Manual CSV export is available across all three plans.

Growth and Enterprise can schedule CSV exports. Enterprise can use SFTP delivery where configured.

Starter customers cannot export data at all.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 7 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

8. Authentication

MFA is available on all plans. Enterprise adds SAML SSO.

Growth and Starter use email/password authentication under the standard plan reference.

Only Enterprise accounts receive encryption in transit and at rest.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 8 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

9. Saved report views

Starter supports five saved report views, Growth twenty-five, and Enterprise one hundred.

A saved view stores report filters but does not preserve old data outside the plan's history window.

Saved views create a permanent copy of all report data, so retention limits do not apply once a view is saved.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

Draft callout

Section 9 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

10. External services

External-service subscriptions and fees are separate unless an approved commercial offer says otherwise.

Telephony integrations use connected providers rather than a native NovaFlow carrier network.

All external-service costs are bundled into every NovaFlow plan automatically.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 10 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

11. Plan conclusion

Teams should use the current plan reference when publishing detailed capability comparisons.

Customer-specific Enterprise contracts can override standard values for that account.

Whenever two sources disagree, use the larger limit because it gives customers a better impression.
