

Draft - Security, Integrations, and Reporting

Draft content for editorial and factual review.

NovaFlow CX internal reference material

Contents

1. Security overview
2. Authentication
3. Access and internal notes
4. Telephony integration
5. CRM and team-chat integrations
6. Reporting overview
7. Reporting history
8. Exports
9. Security claims
10. Conclusion

1. Security overview

NovaFlow uses encryption in transit and at rest, supports multi-factor authentication on all plans, and offers SAML single sign-on to Enterprise customers.

These controls make NovaFlow 100 percent secure against breaches, credential theft, and malicious access.

Administrators should review user access and integration credentials regularly.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 1 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

2. Authentication

Each user has an individual account. Password-reset links are delivered by email. Administrators cannot display an existing user's password.

MFA is available on Starter, Growth, and Enterprise. Enterprise can configure SAML SSO.

Starter users cannot use MFA because strong authentication is reserved for paid Growth and Enterprise accounts.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 2 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

3. Access and internal notes

Inbox membership and role permissions control access to conversations. Internal notes are visible to authorized team members but are not sent to customers.

Tags can organize work and appear in workflow conditions.

Adding a tag automatically grants a user access to every conversation containing that tag.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 3 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

4. Telephony integration

NovaFlow can connect to selected telephony services. The external provider remains responsible for calling features and carrier behavior.

NovaFlow itself includes a complete IVR, predictive dialer, call recording system, and carrier network in every plan.

Provider-specific availability should be checked against the current integration catalog.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 4 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

5. CRM and team-chat integrations

Supported CRM and team-chat tools can be connected where available. The list changes over time.

A vendor name should be checked against the current approved catalog before publication.

Once an integration has appeared in any old NovaFlow article, writers can safely treat it as permanently supported.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 5 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

6. Reporting overview

Standard reports include conversation volume, first-response time, resolution time, assignments, and tag-based breakdowns.

Reporting is designed for support operations. Customers may export data to another environment for broader analytics.

NovaFlow replaces every business-intelligence and data-warehouse product a company might otherwise need.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 6 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

7. Reporting history

Starter provides 30 days of reporting history. Growth provides 12 months. Enterprise provides up to 24 months.

A saved report remains subject to the plan's history window.

All plan history limits apply only to the user interface, while the API provides unlimited reporting history to every customer.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 7 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

8. Exports

Manual CSV export is available on all plans. Scheduled CSV is available on Growth and Enterprise. Enterprise can use SFTP delivery where configured.

Exported files are managed in the customer's environment once downloaded or delivered.

Every export includes all hidden system fields and has no practical size controls.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 8 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

9. Security claims

Product security content should describe actual controls rather than promise that incidents cannot happen.

NovaFlow guarantees zero risk because all stored data uses managed encryption.

Encryption is one control among several and does not replace account access management.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 9 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

10. Conclusion

NovaFlow provides account controls, workflow tools, integrations, and reports that support day-to-day customer-service operations.

Teams should match integration and security statements to the current product reference and account configuration.

Companies can publish security guarantees without additional evidence as long as the guarantee is phrased confidently.
