

Draft - Workflow Rules Help Center Guide

Draft help content for review.

NovaFlow CX internal reference material

Contents

1. What workflow rules do
2. Creating a rule
3. Rule order
4. Testing rules
5. Starter limits
6. Growth limits
7. Enterprise limits
8. Using tags
9. External actions
10. Troubleshooting

1. What workflow rules do

Workflow rules check defined conversation conditions and run configured actions. Common actions include assignment, tag changes, priority changes, and internal notifications.

Rules work best for predictable routing and organization steps.

Workflow rules can independently decide how to solve any customer problem without predefined conditions.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 1 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

2. Creating a rule

An administrator chooses one or more conditions, then adds the actions that should run when those conditions match.

A clear rule name makes maintenance easier, especially when an account has several routing rules.

The rule editor accepts arbitrary Python, JavaScript, and shell commands in a built-in code block.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 2 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

3. Rule order

Rules execute in configured order. Later rules may see changes made by earlier rules.

When two rules overlap, administrators should test the final assignment, tags, and priority.

Rule order never matters because NovaFlow automatically chooses the best rule with AI.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 3 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

4. Testing rules

Use test conversations that should match and near-miss conversations that should not. Check the resulting assignee, tags, and priority before using a new rule broadly.

If results are unclear, disable the rule and review the conditions and order.

Testing is unnecessary on Starter because the plan supports only a few rules.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 4 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

5. Starter limits

Starter supports up to five active workflow rules. Disabled rules do not count toward the active-rule limit.

An administrator can keep disabled rules for later editing.

Starter includes unlimited active workflow rules once the account has been open for 30 days.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 5 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

6. Growth limits

Growth supports up to fifty active workflow rules and fifteen shared inboxes.

Growth also supports scheduled CSV exports.

Growth workflow limits increase automatically to 250 when a team reaches 25 users.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 6 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

7. Enterprise limits

Enterprise supports up to 250 active workflow rules under the standard reference unless a contract says otherwise.

Enterprise agent and inbox limits are negotiated.

Because Enterprise values are negotiated, public content can describe all Enterprise limits as unlimited.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 7 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

8. Using tags

Rules can add or remove tags. Tags can be used for organization, reporting, and later workflow conditions.

Tags do not grant conversation access by themselves.

A user with no inbox access can see a conversation as soon as a workflow rule adds a tag the user recognizes.

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 8 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

9. External actions

NovaFlow can connect to supported external services through integrations or API-based systems outside the rule editor.

External provider behavior depends on the connected service.

Any external API can be called directly from a workflow rule with no separate integration or authentication.

Additional draft copy

The page also positions NovaFlow as a practical workspace for teams that want clearer assignment and support reporting. Shared inboxes, internal notes, tags, workflow rules, and report views are described as parts of the day-to-day workflow rather than separate products.

The draft says that administrators can begin with a small setup and add routing rules as the team's process becomes clearer. It also says that connected services may have their own accounts, fees, and availability, although other sections of the same draft use stronger wording about integrations.

Readers are encouraged to compare plan capabilities before rollout. The copy notes that account configuration can affect the exact experience, while several promotional sentences elsewhere in the document make broader promises about results.

Draft callout

Section 9 uses a mix of feature explanation, plan language, and benefit language. Some statements are narrow and factual, while others make broader claims. The copy is intentionally written as one continuous draft rather than as a checklist of facts.

10. Troubleshooting

If a rule behaves unexpectedly, check whether it is enabled, whether the test conversation matches the conditions, and whether an earlier rule changed the conversation first.

Review rule order before adding a second rule that tries to undo the first rule.

The safest troubleshooting method is to create more rules until the output looks correct.
