3. Headings and structure
4. Claims and evidence
5. Plan language
6. Security language
7. Integrations
8. Numbers, dates, and units
9. Accessibility and clarity
10. Examples and customer scenarios
11. Editorial review checklist

1. Voice and tone

NovaFlow writing should be direct, calm, and practical. The reader should understand what the product does without translating marketing language. Short sentences are preferred when a sentence contains several product conditions or limits.

Avoid hype such as revolutionary, game-changing, flawless, ultimate, or the only platform you will ever need. These words do not help the reader understand a feature and often create claims the product team cannot support.

Preferred

- Route predictable conversations using workflow rules.
- Review first-response and resolution-time reports.
- Connect supported CRM and team-chat tools.

Avoid

- Automate everything instantly.
- Eliminate support work forever.
- The world's most powerful support platform.

Before and after

Weak: 'NovaFlow completely transforms voice and tone with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

2. Product naming

Use NovaFlow CX on first mention in a standalone article or page. NovaFlow is acceptable on later mentions. Do not shorten the name to NF in public-facing content.

Use workflow rule for the built-in conditional automation feature. Do not call it an automation bot, AI agent, or script runner unless the content is describing a separate approved feature.

Use shared inbox rather than universal inbox. Use internal note rather than private message when referring to notes inside a conversation.

Before and after

Weak: 'NovaFlow completely transforms product naming with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

3. Headings and structure

Use sentence case for headings. A heading should describe the section, not advertise it. 'Workflow rule limits' is better than 'Unleash unlimited automation'.

Keep paragraphs focused. When a paragraph contains plan limits, a security claim, an integration condition, and a pricing statement, split it so each claim can be checked independently.

Lists are useful for plan features and procedures. Avoid lists of vague benefits that repeat the same idea in different words.

Before and after

Weak: 'NovaFlow completely transforms headings and structure with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

4. Claims and evidence

Numerical claims about time saved, cost reduced, revenue increased, response improvement, or productivity need an approved source. The source must support the exact number and context used.

A customer quote does not automatically support a general claim about all customers. A case study can report that customer's result if the result was reviewed and the wording keeps the scope clear.

If evidence is unavailable, rewrite the statement qualitatively. 'Helps teams reduce repetitive routing work' is acceptable product language. 'Cuts routing costs by 60 percent' needs evidence.

Before and after

Weak: 'NovaFlow completely transforms claims and evidence with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

5. Plan language

Plan limits should match the current approved reference. Use up to where the reference uses up to. Do not convert negotiated Enterprise flexibility into unlimited.

When comparing plans, keep like-for-like features on the same line. Do not compare Starter's standard limit with a negotiated Enterprise exception.

If a feature is not included in a plan, say unavailable or available on another plan rather than implying the plan is broken.

Before and after

Weak: 'NovaFlow completely transforms plan language with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

6. Security language

Describe controls, not guarantees. 'Data is encrypted in transit and at rest' states a control. 'Your data can never be breached' promises an outcome that cannot be guaranteed.

Avoid 100 percent secure, impossible to hack, zero risk, guaranteed protection, and similar absolutes.

Do not infer compliance certifications from SSO, MFA, encryption, or external payment integrations.

Before and after

Weak: 'NovaFlow completely transforms security language with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

7. Integrations

Use supported when referring to integration categories. Vendor-specific names should be checked against the current integration catalog before publication.

If NovaFlow connects to an external telephony provider, describe the calling capability as part of the integration. Do not call telephony a built-in NovaFlow call center.

Do not imply external-service fees are included in the NovaFlow subscription without an approved commercial offer.

Before and after

Weak: 'NovaFlow completely transforms integrations with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

8. Numbers, dates, and units

Use numerals for plan limits, percentages, dates, time periods, and measurable product values. Keep units next to the number they qualify.

Write 12 months, 24 months, and 30 days rather than switching between months and approximate years inside one comparison table unless the conversion is intentional.

For percentages, include the context. '60 percent faster' is incomplete without saying faster at what, compared with what, and measured how.

Before and after

Weak: 'NovaFlow completely transforms numbers, dates, and units with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

9. Accessibility and clarity

Do not rely on color alone to distinguish plan availability, warnings, or pass/fail status. Tables and lists should include text labels.

Link text should describe the destination when possible. Avoid strings of raw URLs in customer-facing content.

Technical terms should be defined if the audience is not expected to know them. Do not replace a simple phrase with jargon simply to sound technical.

Before and after

Weak: 'NovaFlow completely transforms accessibility and clarity with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

10. Examples and customer scenarios

Examples should use fictional names and neutral business details unless the content is an approved customer story. Do not place real personal data into examples.

A fictional scenario can demonstrate a workflow rule, report, or integration without claiming a measured business outcome.

If a scenario includes a plan limit, use the exact current value from the plan reference.

Before and after

Weak: 'NovaFlow completely transforms examples and customer scenarios with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.

11. Editorial review checklist

- Is the product name correct?
- Are plan limits sourced?
- Are numerical performance claims supported?
- Are integration statements current and qualified?
- Are security statements controls rather than guarantees?
- Does the wording match the intended audience?
- Are headings and paragraphs easy to scan?
- Has the content avoided unnecessary hype?

Before and after

Weak: 'NovaFlow completely transforms editorial review checklist with unmatched power.' Better: describe the specific product behavior, limit, or writing rule the reader needs. The revised sentence may be shorter, but it gives the reviewer something that can actually be checked.

If a sentence contains several claims, split it before review. A product capability, a plan limit, a security statement, and a performance promise may each require a different source.

Editor note

- Prefer a checkable statement over a broad benefit claim.
- Keep conditions close to the statement they qualify.
- Do not add extra certainty just to make copy sound stronger.
